

THAT WHICH IS CLAIMED IS:

1. A process to produce a composition of matter, said process comprising contacting an organometal compound, a solid Lewis acid compound, and an organoaluminum compound to produce said composition,

wherein said composition consists essentially of a post-contacted organometal compound, a post-contacted solid Lewis acid compound, and optionally, a post-contacted organoaluminum compound, and

wherein said composition can polymerize ethylene into a polymer with an activity greater than a composition that uses the same organometal compound, and the same organoaluminum compound, but uses untreated Ketjen grade B alumina instead of said solid Lewis acid, and

wherein said organometal compound has the following general formula

wherein M^1 is selected from the group consisting of titanium, zirconium, and hafnium, and

wherein (X^1) is independently selected from the group consisting of cyclopentadienyls, indenyls, fluorenyls, substituted cyclopentadienyls, substituted indenyls, and substituted fluorenyls, and

wherein said substituents on said substituted cyclopentadienyls, substituted indenyls, and substituted fluorenyls, are selected from the group consisting of aliphatic groups, cyclic groups, combinations of aliphatic and cyclic groups, and organometallic groups, and hydrogen; and

wherein (X³) and (X⁴) are independently selected from the group consisting of halides, aliphatic groups, cyclic groups, combinations of aliphatic and cyclic groups, and organometallic groups, and wherein (X²) is selected from the group consisting of Group OMC-I or Group-OMC-II, and

wherein said organoaluminum compound has the following general formula.

wherein (X⁵) is a hydrocarbyl having from 1-20 carbon atoms, and

wherein (X⁶) is a halide, hydride, or alkoxide, and

wherein "n" is a number from 1 to 3 inclusive.

2. A process to produce a composition of matter, said process comprising contacting an organometal compound, a solid mixed oxide compound, and an organoaluminum compound to produce said composition,

wherein said composition consists essentially of a post-contacted organometal compound, a post-contacted solid mixed oxide compound, and optionally, a post-contacted organoaluminum compound, and

wherein said composition can polymerize ethylene into a polymer with an activity greater than 100 (gP/(gS·hr)), and

wherein said organometal compound has the following general formula

wherein M¹ is selected from the group consisting of titanium, zirconium, and hafnium, and

wherein (X¹) is independently selected from the group consisting of cyclopentadienyls, indenyls, fluorenyls, substituted cyclopentadienyls, substituted indenyls, and substituted fluorenyls, and wherein said substituents on said substituted cyclopentadienyls, substituted indenyls, and substituted fluorenyls, are selected from the group consisting of aliphatic groups, cyclic groups, combinations of aliphatic and cyclic groups, and organometallic groups, and hydrogen; and wherein (X³) and (X⁴) are independently selected from the group consisting of halides, aliphatic groups, cyclic groups, combinations of aliphatic and cyclic groups, and organometallic groups, and wherein (X²) is selected from the group consisting of Group OMC-I or Group OMC-II, and

wherein said organoaluminum compound has the following general formula.

wherein (X⁵) is a hydrocarbyl having from 1-20 carbon atoms, and

wherein (X⁶) is a halide, hydride, or alkoxide, and

wherein "n" is a number from 1 to 3 inclusive, and

wherein said solid mixed oxide compounds comprise oxygen and at least two elements selected from the group consisting of groups 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, and 15 of the periodic table, including lanthanides and actinides.

3. A process according to claim 2 wherein said activity is greater than 150.

4. A process according to claim 3 wherein said activity is greater than 200.
5. A process according to claim 4 wherein said activity is greater than 250.
6. A process according to claim 5 wherein said activity is greater than 300.
7. A composition produced by the process of claim 2.
8. A process of using the composition of claim 7 to polymerize monomers into polymers.
9. A manufacture that comprises polymers produced according to claim 8.
10. A machine that comprises manufactures according to claim 9.
11. A process according to claim 8 wherein said polymers are produced under slurry polymerization conditions.
12. A process according to claim 11 wherein said polymerization is conducted in a loop reactor.
13. A process according to claim 12 wherein said polymerization is conducted in the presence of a diluent that comprises, in major part, isobutane.
14. A manufacture that comprises polymers produced according to claim 13.
15. A machine that comprises manufactures according to claim 14.
16. A composition produced by the process of claim 6.
17. A process of using the composition of claim 16 to polymerize monomers into polymers.
18. A manufacture that comprises polymers produced according to claim 17.
19. A machine that comprises manufactures according to claim 18.
20. A process according to claim 17 wherein said polymers are produced under slurry polymerization conditions.
21. A process according to claim 20 wherein said polymerization is conducted in a loop reactor.

22. A process according to claim 21 wherein said polymerization is conducted in the presence of a diluent that comprises, in major part, isobutane.
23. A manufacture that comprises polymers produced according to claim 22.
24. A machine that comprises manufactures according to claim 23.
25. A process to produce a composition of matter, said process comprising contacting an organometal compound, a solid mixed oxide compound, and an organoaluminum compound to produce said composition,
 wherein said composition consists essentially of a post-contacted organometal compound, a post-contacted solid mixed oxide compound, and optionally, a post-contacted organoaluminum, compound, and
 wherein said composition can polymerize ethylene into a polymer with an activity greater than 300 (gP/(gS·hr)), and
 wherein said organometal compound is selected from the group consisting of
 bis(cyclopentadienyl) hafnium dichloride;
 bis(cyclopentadienyl) zirconium dichloride;
 [ethyl(indenyl)₂] hafnium dichloride;
 [ethyl(indenyl)₂]zirconium dichloride;
 [ethyl(tetrahydroindenyl)₂] hafnium dichloride;
 [ethyl(tetrahydroindenyl)₂] zirconium dichloride;
 bis(n-butylcyclopentadienyl) hafnium dichloride;
 bis(n-butylcyclopentadienyl) zirconium dichloride;
 ((dimethyl)(diindenyl) silane) zirconium dichloride;
 ((dimethyl)(diindenyl) silane) hafnium dichloride;

((dimethyl)(ditetrahydroindenyl) silane) zirconium dichloride;

((dimethyl)(di(2-methyl indenyl)) silane) zirconium dichloride;

bis(fluorenyl) zirconium dichloride, and

wherein

said organoaluminum compound is selected from the group consisting of

trimethylaluminum;

triethylaluminum;

tripropylaluminum;

diethylaluminum ethoxide;

tributylaluminum;

triisobutylaluminum hydride;

triisobutylaluminum;

diethylaluminum chloride, and

wherein

said solid mixed oxide compounds are selected from the group consisting

of mixtures of two or more oxides Al_2O_3 , B_2O_3 , BeO , Bi_2O_3 , CdO , Co_3O_4 ,

Cr_2O_3 , CuO , Fe_2O_3 , Ga_2O_3 , La_2O_3 , Mn_2O_3 , MoO_3 , NiO , P_2O_5 , Sb_2O_5 ,

SiO_2 , SnO_2 , SrO , ThO_2 , TiO_2 , V_2O_5 , WO_3 , Y_2O_3 , ZnO and ZrO_2 .
